

Bus Reservation Seat Booking System

Project Requirements

1.	Create a complete Bus Reservation and Seat Booking System.
2.	Design a simple and user-friendly bus reservation system.
3.	Allow users to search for buses easily.
4.	Provide source and destination selection.
5.	Allow users to select their journey date.
6.	Display all available buses for the selected route.
7.	Provide complete bus details to the user.
8.	Display bus number and bus operator name.
9.	Display bus type such as AC, Non-AC, Sleeper, or Seater.
10.	Display bus departure and arrival time.
11.	Show the total number of seats in the bus.
12.	Display available and booked seats separately.
13.	Allow users to select their preferred seats.
14.	Show the selected seat number before booking.
15.	Calculate the total ticket fare automatically.
16.	Provide complete passenger details.
17.	Store passenger name and contact number.
18.	Store passenger age and gender.
19.	Allow multiple passengers to be added to one booking.
20.	Provide complete route details.
21.	Display the starting point and destination.
22.	Display all important stops on the route.
23.	Provide multiple boarding points for passengers.
24.	Allow passengers to select their preferred boarding point.
25.	Display the boarding time and location.
26.	Provide ticket booking confirmation.
27.	Generate a unique booking ID for every reservation.
28.	Display passenger, bus, route, and seat details on the ticket.
29.	Provide a secure payment or booking confirmation option.
30.	Update seat availability immediately after booking.
31.	Prevent users from booking an already reserved seat.
32.	Provide an option to cancel a booked ticket.
33.	Display the cancellation status of each booking.
34.	Update the seat status after ticket cancellation.
35.	Store all booking and cancellation information.
36.	Provide a booking history for passengers.

37.	Allow users to view their current and cancelled bookings.
38.	Provide proper validation for passenger and booking details.
39.	Display clear success and error messages.
40.	Make the system responsive and easy to use.
41.	Ensure the Bus Reservation System is reliable, organized, and efficient.
